# Cutting software for paint protection films

Cutting software enables the precise cutting of paint protection films (PPF) and optimises the entire processing procedure. The combination of ORAFOL films and cutting software ensures precise, economical and efficient processing. The intuitive operation and regular updates make it the ideal solution for professional use.

A comprehensive vehicle database with over 29,000 PPF kits for more than 120 car manufacturers ensures maximum flexibility. If a model is missing, it will be added within 48 to 72 hours.

**Free MATMAK trial version and subscription at a special price**

**Precision and Efficiency:** The software reduces rework, saves material and time, and thereby lowers costs. Pre-cut film templates eliminate the need for direct cutting on the vehicle, prevent surface damage, and facilitate processing.

**Flexible Application:** Whether for front protection or full wrapping, the wide selection of PPF kits provides suitable solutions for different requirements.

**Free Trial and Support:** After free registration, a 7-day trial version is available with access to 3 vehicles for plotting. A 24/7 support service is available to answer any questions.

**Attractive Conditions:** ORAFOL customers benefit from preferential pricing compared to direct registration. An annual subscription with additional cost benefits is also available. For occasional use, a flexible credit-based option is provided. The ORAFOL promo code can be requested at **ppf-software@orafol.de.**

## Why ORAFOL

ORAFOL is your one-stop-shop for all components needed for professional car wrap installations.

The ORAFOL name is your guarantee for the highest quality materials, backed by decades of experience and a strong „Made in Germany“ mark.
