Additional Observations NONE

Difficulties Encountered during Testing NONE

Each specimen was self adhered to 10mm thick plasterboard prior to testing

Tests were conducted with a wire grid placed over the sample during testing .  
This was done to contain intumescent sample within the sample holder.

These test results relate only to the behaviour of the product under the conditions of the test, they are not intended to be the sole criterion for assessment of performance under real fire conditions.

The results of these fire tests may be used to directly assess fire hazard, but it should be recognised that a single test method will not provide a full assessment of the fire hazard under all fire conditions.
