ORAJET® 3720 /
3740

ORAJET® 3720 / 3740

Digital Printing - your choice: removable or permanent

These two new digital printing films made of polypropylene (PP) are a PVC-free choice for temporary advertising graphics e.g. in shops or at events. They exist in a removable and permanent version.

They can be used indoors as well as in outdoor areas for a short term. Due to the short-term use the application can be done without a laminating film. This means material savings and thus a more sustainable input.

The water-based solvent-free adhesives enable an application on many different surfaces.

Product benefits:

- PVC-free digital printing film
- White with matt surface
- For indoor and short-term outdoor use
- UV- or latex-inks
- Depending on use removable (3720) or permanent (3740)

Recommended laminating films:

- For outdoor use the durability is extended with the laminating film ORAGUARD® 236

Engineered to Achieve Perfection™
