

## ORALITE® 5095 Anti-Graffiti Film

Clearly visible and readable traffic signs are a key factor for driver safety and graffiti on traffic signs can be very dangerous. As a driver you need to stay focused on the traffic – distractions can put you and others at risk. Signs which are difficult to clearly understand due to graffiti are a risk to traffic safety. An additional problem with graffiti is that it is extremely costly to remove.

**ORALITE® 5095 Anti-Graffiti Film** works as a protective surface laminate. It is solvent resistant and works as a barrier to marker pens, spray paint and other surface contaminants.

With ORALITE® 5095 graffiti is easy to wipe away and even sticky labels attached to the sign are easy to remove. The film is UV resistant and can be cleaned without reducing its effectiveness.

### **Product features and benefits include:**

- Protection of printed and non-printed ORALITE® surfaces against graffiti vandalism
- Intended for lamination of ORALITE® materials
- Fluoropolymeric film
- 25 micron
- Applied with application tape for easy application
- Highly transparent
