ORAFOL is one of the worlds leading manufacturers of innovative self adhesive graphics films, reflective films and adhesive tape systems. Established in 1808, originally manufacturing postage stamp inks for the Kingdom of Prussia, certainly a far cry from supplying world leading vehicle wrapping films today. The company serves and manages the increasing and demanding challenges of an international dynamic market. ORAFOL operates across Europe, USA, Asia and the Middle East and has more than 1800 employees worldwide. The expanding 250,000m² manufacturing facility in Oranienburg Germany is ORAFOL headquarters.

Welcome to ORAFOL Australia

ORAFOL has been involved in the Australian market for many years through a series of distribution channels in all states of Australia.

ORAFOL Australia was established following the acquisition of these distribution channels in 2017. Our brand is now well established through the quality and consistency of the product portfolio.

Today, the team at ORAFOL Australia are focused on driving the brand and the product portfolio by developing strong relationships with customers within the relevant signage and graphics market segments.

The Australian market is very dynamic and delivering continual growth in traditional arenas as well as in adjacent markets and this is where our sales and marketing teams will be very active.

Our vision is clearly focused on being the industry leading manufacturer direct sales organization providing innovative products and best practice customer service. We look forward to the challenges and playing a leading role in your journey ahead.

Alex McClelland
Managing Director

Walls Films

GRASS ROOTS
to GREATNESS

Engineered to Achieve Perfection™

ORAJET® 3268 150mic Interior Matt Wall Film

Durable Monomeric Print Film available in anti-glare matt finish. Ideally suited to large format wall graphics. Thick film for durability coupled with removable adhesive makes this an ideal selection for internal wall decoration & advertising.

- Durable Monomeric Print Film
- 150 micron
- Removable adhesive
- Laminate with ORAGUARD 215, 213, 210, 200

PRODUCT CODE	DESCRIPTION	SIZE	1 ROLL	2-5 ROLLS	6 ROLLS +
3268M 010 1370	Matt White Monomeric Print Film - Removable Clear Adhesive	1370mm x 50m	\$392.69	\$359.52	\$331.70

ORAJET® 3628 80mic Interior Matt Wall Film

Durable Monomeric Print Film available in anti-glare matt finish as well as gloss. Ideally suited to large format wall graphics. Conformable film coupled with removable adhesive makes this an ideal selection for internal wall decoration & advertising.

- Durable Monomeric Print Film
- 80 micron
- Removable adhesive
- Laminate with ORAGUARD 215, 213, 210, 200

PRODUCT CODE	DESCRIPTION	SIZE	1 ROLL	2-5 ROLLS	6 ROLLS +

ORAJET® 3954 **Cast Brick Stone Film**

3954 Premium Cast PVC Print Film available in gloss finish. Ideally suited to large format external wall graphics on masonry surfaces such as brick & stone. Conformable film coupled with permanent adhesive makes this an ideal selection for external wall decoration & advertising.

- Durable Cast PVC Print Film
- 55 micron
- Solvent polyacrylate permanent B/O adhesive
- Laminate with ORAGUARD 293, 290
- Remove with heat

PRODUCT CODE	DESCRIPTION	SIZE	1 ROLL	2-5 ROLLS	6 ROLLS +
3954 010 1370	Gloss White Premium Cast Film - Permanent B/O Adhesive	1370mm x 50m	\$793.94	\$772.54	\$751.14

ORAJET® 3554 **Brick Stone Film**

Premium Polymeric Film available in matt white anti glare finish. Ideally suited masonry applications such as brick & concrete.

- Premium Polymeric Print Film
- 70 micron
- High Tack permanent adhesive
- Laminate with ORAGUARD 215

PRODUCT CODE	DESCRIPTION	SIZE	1 ROLL	2-5 ROLLS	6 ROLLS +

Notes on Processing and Handling

ICC Profiles 

Introduction

ORAFOL offers a wide range of self-adhesive digital printing materials for many different applications. They come with a well-matched set of laminating films. To ensure that the films display the specified properties, it is important to follow the instructions

for preparation and application which can be found on www.orafol.com. If you want to apply an ORAFOL material on a car, please also see our practical information for self-adhesive films for application on cars (can be downloaded also on www.orafol.com). ORAFOL recommends to use only material with the same batch number for one graphical application. In this context ORAFOL ensures that every roll of the same batch number consists of the same material and consequently does not have any splices. When different batch numbers are used the technician should conduct tests to find out possible differences in using the films and in the quality of the graphical application.

Storage and Processing Conditions

The self-adhesive products which ORAFOL supplies in rolls should at all times be stored either suspended (with end caps) or standing on end on the roll blocks, and never lying flat (without end caps). For storage and processing, they should be kept in a cool dry place, protected from daylight. Relative air humidity between 50% and 60% and a temperature between +18° C and +22° C should be ensured. Direct sunlight, storage beside radiators etc. should by all means be avoided. Please observe the shelf life instructions contained in the technical data sheet accompanying each film.

Instructions for Printing

The digital printing materials should generally be handled with a high degree of care. Cotton gloves should be used to prevent damage to the surface or soiling. Check the surface quality prior to printing or application. Also check the print file with profiling. The ORACAL® / ORAJET® digital printing media require (due to their different qualities like the thickness of the adhesive layer) different parameter settings of the printer and the selecting software (RIP). Make sure you take the relevant amount of ink and specific colour definitions into account. In addition, check the specifications of the digital printing materials and the inks for their respective applications (indoor / outdoor) and durability, and match them accordingly.

Drying up

Freshly printed films should be spread out and left to dry after printing, to allow the residual solvent to evaporate. If freshly printed vinyls are plotted in the printed areas, the vinyl might shrink. Depending on the ink used, laminating too early may affect the functionality of the film (adhesive power, service life) by preventing residual solvents to evaporate. Printed and non-sufficiently dried films shrink after printing, during the drying process.

If the drying process of the vinyls takes place after application of the substrate, the film may shrink and come off at the edges, from corrugations and rivets. Following these processing and handling instructions, we recommend to spread out and dry the film for at least 72 hours (lying flat or hanging).

Lamination

Lamination of inkjet prints is recommended to ensure longer lives at optimum quality (gloss, colour depth, mechanical damage). ORAGUARD® laminating films enhance the colour effect for the desired appearance of the surface (glossy, matt, semi-gloss), provide excellent protection against the UV-rays of the sun destroying the colour pigments, and against humidity and abrasion. Soiling can easily be removed by using common cleaning agents. We recommend only using films of the same manufacture and type (e.g. monomeric PVC film on monomeric PVC film, and polymeric PVC film on polymeric PVC film) as their raw materials are accurately matched with each other. Lamination has to be done stress free to prevent a deformation of the film compound. For the same reason we recommend to ensure that the temperature of the compactor is not higher than +30° C. Furthermore, we refer to our list of recommendations for complementary application of the printing materials in inkjet and thermotransfer printing, and to the specific laminating films provided for their surface protection.

For product information about ORAGUARD® laminates, please see www.orafol.com.

Application

The application is described in the practical information for plotter films. For application onto cars, please see in addition the practical information on how to apply self-adhesive films on cars. For application onto car windows, the remarks in the practical information for self-adhesive films for application onto cars are to be followed.

Removability

Please see the practical information for plotter films.

General Information

ORAFOL provides information on ICC profiles for various printers. Please go to www.orafol.com. The information in here is based on our knowledge and experience. We cannot cover all variations on application methods. Specialised or occupational knowledge and competence of a professional sign maker is presupposed. Due to the diversity of potential influencing factors during application and use, we recommend customers who wish to use the films for special applications to make their own tests of our products. No legally binding warranty of certain qualities can be derived from our information.

Floor Films

Engineered to Achieve Perfection™

ORACAL® 1663 110mic Internal Floor Graphic Film

Highly pigmented opaque PVC Print Film. Ideally suited to large format internal floor graphics. Removable B/O adhesive makes this an ideal selection for internal floor graphic applications without leaving residue.

- Durable opaque PVC Print Film
- 110 micron
- Solvent polyacrylate removable B/O adhesive
- Laminate with ORAGUARD 250AS, 255AS

PRODUCT CODE	DESCRIPTION	SIZE	1 ROLL	2-5 ROLLS	6 ROLLS +
1663 010 1370	Gloss White Floor Graphic PVC Film – Removable B/O Adhesive	1370mm x 50m	\$421.58	\$400.18	\$378.78

ORAJET® 3162 100mic Internal Floor Graphic Film

When used as a floor graphic base film. The following films from the range of ORAJET 3162 monomeric print films carry matt & gloss white finish along with clear removable adhesive. This select range is suitable for most floor graphic applications when used in conjunction with the correct laminate film.

- Durable Monomeric Print Film
- 100 micron
- Removable adhesive
- Laminate with ORAGUARD 250AS, 255AS

*while stocks last, will be superseded by 1600mm width

Practical Information

ORAFOL® Floor Graphics Systems

Preliminary Remarks

ORAFOL® Floor Graphics Systems consist of a film especially developed for this purpose by ORAFOL®, and an ORAGUARD® film with an antiskid surface. ORAFOL® Floor Graphics Systems are suitable for application to most floor materials. Problems may only occur when applied to uneven, porous or painted floors treated with floor polish or cleaned with water additives or to PVC, carpets or marble floors.

ORAFOL® recommend using only material with the same batch number for one graphical application. When different batch numbers are used the technician should make tests to find out possible differences in using the films and in the quality of the graphical application.

Cleaning of the Floor

Each surface to which a film is to be applied needs to be cleaned with a suitable solvent removing any grease before applying the floor graphics system. We recommend the use of isopropyl alcohol (Isopropanol). The floor must completely dry off before applying the film.

Application

The film is applied in a dry state. Remove the protective paper completely and apply the film by pressing it strongly against the floor. Apply big overlapping sweeps of a squeegee across the surface of the laminate to avoid the formation of gas bubbles between the graphic floor system and the floor. We recommend an overlap of the system's laminate at the edges of at least 2cm. Check the edges and press them again forcefully against the floor after you have completed the application.

Please Note:

The edges of the system should not be applied to protruding surfaces such as stair nosings or crevices. The edges of the films must never end up in a tile joint or crevice between parquet deals. Do not step on the floor for at least 30 minutes in order to ensure sufficient adhesion.

Cleaning After Application

Wait at least 24 hours before cleaning the floor after application.

Removal of the Film

Remove the floor graphics system at a 90° angle starting from one corner.

ORAFOL® Floor Graphics Systems are easily removable. If properly applied, the system will not leave behind any adhesive residues. In some cases, the part of the floor which had been covered by the film may display a somewhat different colour shade than the surrounding area. This is due to the fact that the uncovered part of the floor has been exposed longer to the UV radiation of the sun.

This information is based on our knowledge and experience. Not all considering aspects of application have been explained. Specialised or occupational knowledge and competence of a professional sign maker are presupposed. Due to the diversity of potential influencing factors during application and use, we recommend to make own tests of our products by customers who wish to use the films for special applications. No legally binding warranty of certain qualities can be derived from our information.

ORAGUARD® 210SO 70mic Textured Floor Graphic Laminate

Monomeric PVC Laminate in sand grain textured finish. Ideally suited for internal short term self adhesive floor graphic applications.

- Monomeric PVC Laminate
- UV Protection
- 70 micron
- Carries AS4586:2013 slip rating P2

PRODUCT CODE	DESCRIPTION	SIZE	1 ROLL	2-5 ROLLS	6 ROLLS +
210SO 1370	Sandy Grain Monomeric PVC Laminate	1370mm x 50m	\$280.34	\$269.64	\$258.94

ORAGUARD® 250AS 120mic Textured Floor Graphic Laminate

Special textured PVC floor graphic laminate. Ideally suited as a laminate for ORACAL 1663 self adhesive print film & used for internal floor graphic applications.

- Special PVC Floor Graphic Laminate
- Textured anti slip surface
- 120 micron
- Carries AS4586:2013 slip rating P2

PRODUCT CODE	DESCRIPTION	SIZE	1 ROLL	2-5 ROLLS	6 ROLLS +

Tips for Laminating Perforated Window Films

ORAFOL recommend using ORAGUARD® 297GF to laminate Perforated Window Films

- Why?

✓	ORAGUARD 297GF is Premium Cast PVC Film
✓	70mic thickness
✓	High Gloss finish
✓	Optical clarity
✓	High level UV protection of your print
✓	Optimal surface hardness

Always refer to Product Data Sheets for the Perforated Window Film & the Laminate.

- Pay particular attention to;

✓	Surface preparation
✓	Recommended temperature & humidity
✓	Printing & ink degassing
✓	Laminating pressure

Vehicle & Marine Films

Engineered to Achieve Perfection™

ORACAL® 970RA

Premium Wrapping Cast

ORACAL® 970 Premium Wrapping Cast series is your ideal wrapping film for solid coloured fleet and motor sport vehicle wraps. Exceptional dimensional stability and conformability over curved surfaces, rivets and corrugations. The material does not require an overlamine.

Product benefits include:

- Multi-layered cast PVC film (110 micron)
- 96 vivid standard colours
- Glossy and matt colours available
- Super matt available in black
- Large range of metallic colours
- Excellent dimensional stability and gloss retention
- Solvent polyacrylate adhesive

RA product benefits also include:

- The *RapidAir®* technology allows a rapid and bubble-free application and thus requires less application time and cost

Note: The product should be worked in, cut and applied with an overlap at the edge, for more curved surfaces, or for corrugations and rivets.

Premium Shift Effect Cast

The exciting variation of the classic ORACAL® 970 series - with a colour shifting effect depending on which angle you view the material from.

Product benefits include:

- Unique shade shifting effect where the colour changes depending on viewing angle
- Multi-layered cast PVC film (110 micron)
- Glossy and matt colours available
- All the same product benefits as the classic ORACAL® 970 series above.
- 970RA: *RapidAir®* technology allows a rapid and bubble-free application and thus requires less application time and cost.

Premium Special Effect Cast

Glamorous version of the classic ORACAL® 970 series - with a unique shimmer effect

Product benefits include:

- Unique glitter effect
- Multi-layered cast PVC film (110 micron)
- Glossy and matt colours available
- All the same product benefits as the classic ORACAL® 970 series above.
- 970RA: *RapidAir®* technology allows a rapid and bubble-free application and thus requires less application time and cost

ORACAL® Cleaning and Care Products

The best choice for wrapped vehicles

ORACAL® Cleaning and Care agents have been specifically developed for the surface treatment of cars wrapped with ORAFOL® car wrapping films. All the products in the range have been engineered to enable consistent, excellent results.

With ORACAL® cleaning and care agents, you can be sure that you are always working with professional cleaning and care treatment for your vehicle.

The products are supplied in complete care kits, with versions for glossy or matt surfaces. Each kit contains:

- 500 ml Shampoo
- 500 ml Intensive Cleaner
- 500 ml Fast Care Agent
- 500 ml Long-Lasting Seal
- 2 x special Wrapping Film Cleaning Sponges

For the professional car wrapper:

ORACAL® Pre-wrap surface cleaner

This special pre-wrap surface cleaner degreases and removes cleaning agent residues prior to the application of ORAFOL® self-adhesive films.

ORACAL® 970RA Premium Wrapping Cast

ORACAL® 970 Premium Wrapping Cast series is your ideal wrapping film for solid coloured fleet and motor sport vehicle wraps. Exceptional dimensional stability and conformability over curved surfaces, rivets and corrugations. The material does not require an overlamine.

Product benefits include:

- Multi-layered cast PVC film (110 micron)
- 96 vivid standard colours
- Glossy and matt colours available
- Super matt available in black
- Large range of metallic colours
- Excellent dimensional stability and gloss retention
- Solvent polyacrylate adhesive.

RA product benefits also include:

- The *RapidAir*® technology allows a rapid and bubble-free application and thus requires less application time and cost.

PRODUCT CODE	DESCRIPTION	SIZE	\$/LM	\$/LM - ROLL

Phosphorescent Films

Engineered to Achieve Perfection™

ORAJET® 3930

3930 Phosphorescent film is a three-layered, light yellow, cadmium-free Premium Cast PVC film with a gloss surface. Fulfills the requirements of DIN 67510. The afterglow effect is active after the light source has been switched off. This process can be repeated as often as required as the phosphorescent properties of the film will not be impaired. For indoor and outdoor marking of emergency exits and danger areas. For exterior use, it is recommended that the film be combined with ORAGUARD 293 laminating film.

ORAMASK® 811 Stencil Film

White dyed special 80mic PVC film with matt surface carrying silicone release paper for excellent weed-stripping properties. The silicone paper is a light blue colour which forms a stronger contrast to the lettering. ORAMASK 811 carries removable adhesive for use in stencil applications, especially painting and spraying techniques, promotional lettering and exhibition decoration. Due to its relatively high stiffness, this stencil film is especially suitable for spraying and painting onto smooth surfaces.

PRODUCT CODE	DESCRIPTION	SIZE	Price 1-9LM	Price 10-24LM	Price 25-49LM	Price 50+ LM
811 630	ORAMASK 811 Opaque White	630mm x 50m	\$5.15	\$4.12	\$3.61	\$2.58

Permanent Traffic Signs – Prismatic Films

High Intensity Prismatic (HIP) Grade

ORALITE® 5910

For long term outdoor applications

Product benefits include:

- High prismatic brightness
- Weatherproof
- Surface of high performance acrylic film
- Compliance to AS/NZS 1906.1:2017 Class 400 (Class 1W)
- ORALITE® 5910 is CE-certified
- Excellent printability
- Screen printing with ORALITE® 5018
- UV digital printing on ORALITE® UV Traffic Sign Printer, with ORALITE® 5019 Digital Printing Ink
- Transparent film: We recommend ORALITE® 5061
- Lettering film: We recommend ORALITE® 5081
