

ORAJET® 3981RA Premium Eco Digital Print

Green Wrappings stretching the ORAFOL wrapping range even further

The new car wrapping film from ORAFOL – ORAJET® 3981RA Premium Eco Digital Print – is the environmentally friendly alternative when it comes to car wrapping. Being 100% free from PVC as well as plasticisers, this new polyurethane film is the latest extension to ORAFOL's already large range of "green" graphics films. But even better; the new wrapping film comes with outstanding application features making the installation process even easier. The material can be stretched even more than conventional wrapping films, and will not lift. Covering compound curves is easier than ever, and with the classic ORAFOL® *RapidAir*® construction, the risk of bubbles forming under the material during the process is avoided. The material is developed for inkjet printing, and with its glossy surface prints will stand out exceptionally sharp and brilliant on the vehicle.

Green and stretchable – a new industry favorite is born.

Product benefits include:

- Premium polyurethane high performance polymer film
- Glossy surface
- *RapidAir*® technology for easy and hassle free application
- For long term applications as full wraps onto vehicles
- Inkjet printing with solvent based inks or UV- or Latex inks

Recommended Laminating Film:

- ORAGUARD® 289F – also polyurethane

Engineered to Perform Better™
